The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Claims 1-4 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made without traverse in the reply filed on 03 March 2006.

Claim Rejections - 35 USC § 112 1st Paragraph

Claim 7 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is not understood how a loop is formed. Specifically the description on page 7 lines 19-4 and figures 5 to 10 do not enable on having ordinary skill in the art to make an "alpha" about the hooks.

Claim Rejections - 35 USC § 112 2nd Paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation " said termination step " in line7. There is insufficient antecedent basis for this limitation in the claim.

In addition, claims 5 and 8 claim a method step claimed in an apparatus claims rendering the claims indefinite.

Claim 10 recites the limitation "said cylindrical shield" in line 1. There is insufficient antecedent basis for this limitation in the claim.

In regards to claim 11, the recitation "oriented towards below" renders the claim indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Dolgas et al. (US 5,947,404).

Doglas discloses an apparatus for winding multi-pole stators, wherein the stators are formed by a sheet stack ferromagnetic core, having an axis, a plurality of radially extending poles defining grooves between them, and a terminal board that coats in part the core and has a plurality of hooks 1A; comprising at least one flier 50 and at least one shroud that moves radially with respect to the stator overlapping a respective pole extension, the shroud comprises means 68 for guiding the wire on the hook (see Figure 7).

In regards to claim 7, Doglas discloses the wire forms a loop about the hooks 1A and a movable shield 68 arranged between a disengage and an engaged position (Fig. 7) between the

Art Unit: 3654

hook and the shroud, suitable for keeping the wire at a forced position, for preventing the wire form disengaging from the hook when the flier moves backwards.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Sakashita et al. (US 5,606,208).

Sakashita discloses an apparatus for winding multi-pole stators, wherein the stators are formed by a sheets stack ferromagnetic core, having an axis, a plurality of radially extending poles 3 defining grooves between them, and a terminal board that coats in part the core and has a plurality of hooks 6; comprising at least one flier and at least one shroud that moves radially with respect to the stator overlapping a respective pole extension, the shroud comprises means 23 for guiding the wire on the hook.

Allowable Subject Matter

Claims 8-13 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Application/Control Number: 10/631,099 Page 5
